UI/UX CASE STUDY

FOOD DELIVERY

Food Delivery App

One clear solution for food delivery from stores, restaurants, cafes and fast snack bars.
Perfect for fast & tasty using

Project will cover three fundamental steps of the core experience

Discovery

To help people in various cities reach out to various restaurants of their choices.

Merchant

To help restaurants reach out to a wider market.

Order/Payment

To deliver orders to respective customers who place orders using the app.

The problem statement

The online food ordering system sets up a food menu online and customers can easily place the order as per they like. Also, the online customers can easily track their orders. The anagement maintains customer's database, and improve food delivery service. This system also provides a feedback system in which user can rate the food items. Also, the proposed system can recommend restaurants, food, based on the ratings given by the user, the restaurant staff will be informed for the improvements along with the quality. The payment can be made online or cash or pay-on-delivery system. For more secured ordering separate accounts are maintained for each user by providing them an ID and a password.

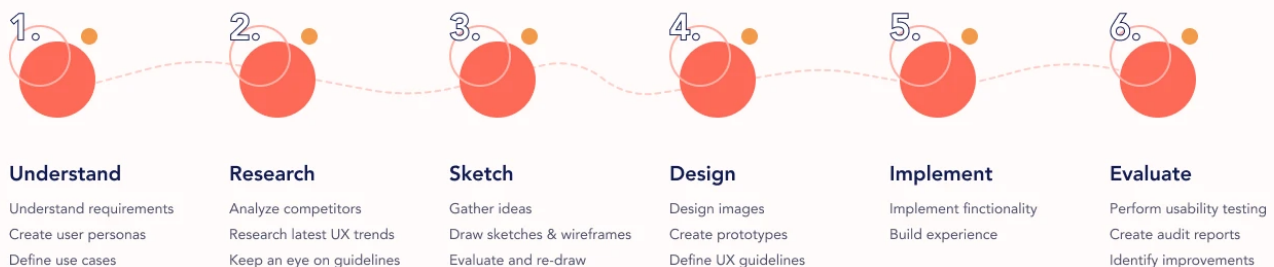

Overview

Online platform for food ordering and on-demand hyperlocal delivery

We believe that by making a product or service that allow users to easily order food regardless of location, we would help them achieve their need of saving time by making the ordering process easy. We will know this to be true when we see that users who use the app receive their exact orders on time.

User research

Interview

Project Goals

- To help people in various cities reach out to various restaurants of their choices.
- To help restaurants reach out to a wider market.
- To deliver orders to respective customers who place orders using the app.
- To improve the cashless economy system.

User Goals

- See various dishes prepared by various restaurants in various cities
- Place orders
- Track order
- Fund wallet, placing order via wallet instead of using a card/pay on delivery.

Target Users

- Groad is for everyone, some allergic to something, some are vegetarian, some eat halal, some of the diets, some want pizzas, but the spirit of togetherness remained. This redesign is aimed at those who want to eat together. Aimed for respecting people's choices of food.
- Aimed for people who don't want to miss eating together. Those people are :
- A person who's busy and want a different kind of food.
- People from different department want to eat together
- Families and friends hanging out together

Journey Map

In the beginning of study, I conducted an interview with several participants who use online food delivery apps regularly. After talking with people about their real experience and expectation of delivery apps, I developed a user journey map to capture the crucial pain points and challenge users may encounter and cause frustration. Here is my interview questionnaire and the journey map based on the result.

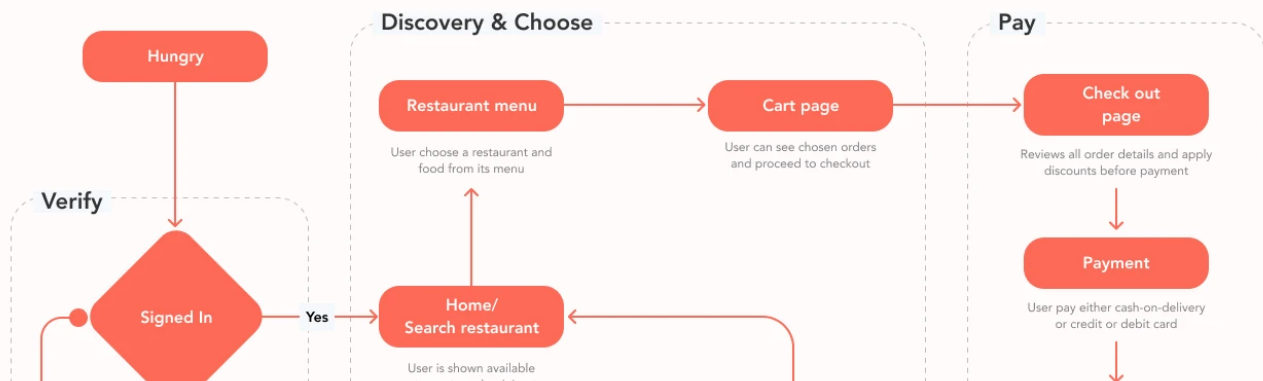

I asked about why do they use food delivery apps, a common answer would be :

- Too lazy to go out
- Too busy that cannot leave the work
- Bored of available nearby food
- No food and trapped in the rain

	Trigger	Browsing	Ordering	Waiting for delivery	After delivery
Doing	After work/ after class/ family gathering/ movie night/ too busy to cook/ invite friends over for dinner holiday celebration	Search the name of restaurant/ randomly browse the app looking for inspiration/ ask others for opinions	Choose items/ add customized requirement/ asking others/ paying/ checking review	Checking the progress or order/ Order something else from other restaurants/ Watching TV and wait/ Call friends to eat when food arrived	Enjoy the meal/ leave review/ leave tips/ clean up
Thinking	What should I order? Should I try something new? What did I eat yesterday? Should I ask people to order together? DO I have time to wait?	Should I order from this restaurant? This picture looks great. I feel more hungry. Too many option to choose. Should I ask others? This is so expensive (or cheap). How many calories I can eat? Does this restaurant have vegetarian option?	Will these enough for us? Can I add this customized order? Will food still be warm when it arrives?	Will hthis be on time? Will drive find my place? Will there be traffic? Can I order something else? Do I need to call restaurant or driver?	I like this restaurant (or service) a lot I dislike this restaurant (or service)
Feeling	Feel so lazy. I just want something quick, excited to browse the option. So hungry, exhausted	Fell excited to choose/ Feel tired of choose/ Feel nervous about the limited time of discount	Nervous about the uncertainty/ Excited for upcoming food/ Feel so hungry/ Feel annoyed about the waiting time	Nervous about the uncertainty/ Excited for upcoming food/ Feel so hungry/ Feel annoyed about the waiting time	Satisfied/ Unsatisfied/ Angry/ Happy

User Flow

After getting the picture using the storyboard, I made a basic user flow (happy case) when user needs to buy food using a mobile app.

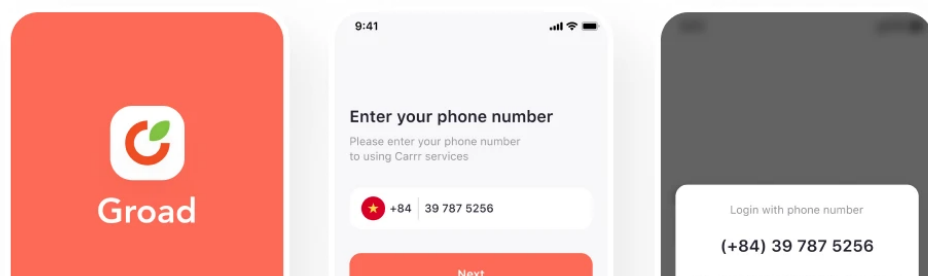

01 Onboarding

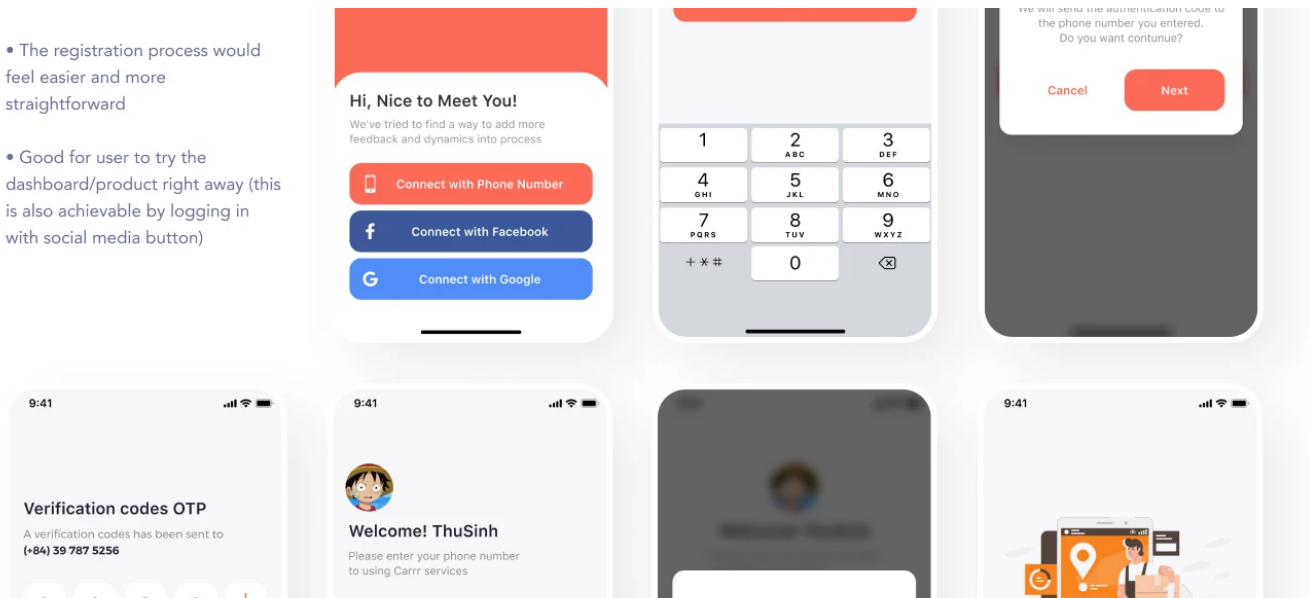

02 Verify Account

A Very Simple Registration Form

We tried to make registration form as simple as possible where user only needs to fill-in three input boxes. Making it very simple can possibly increase the sign-up rate on this process.

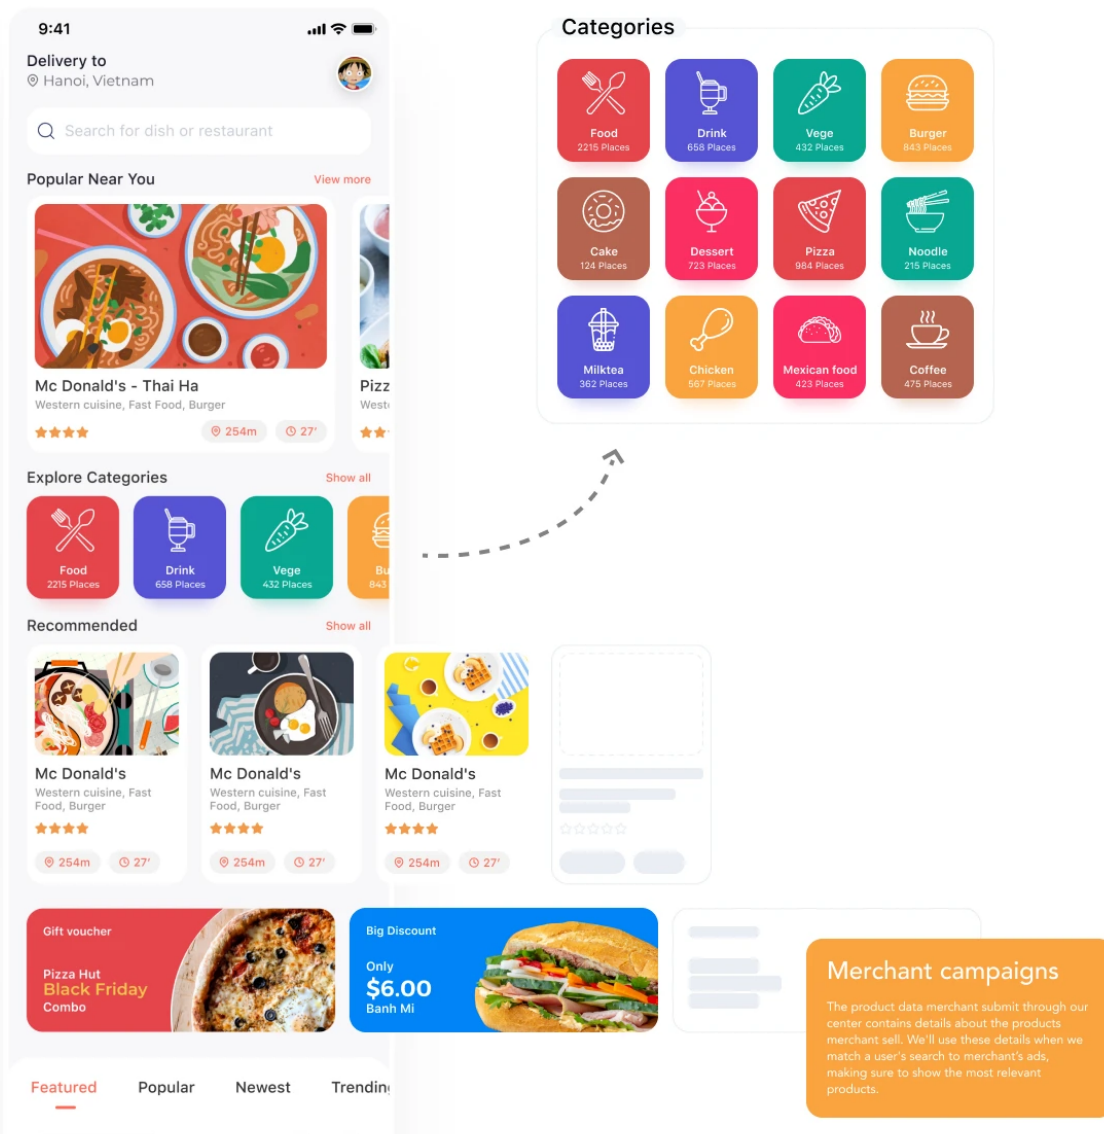

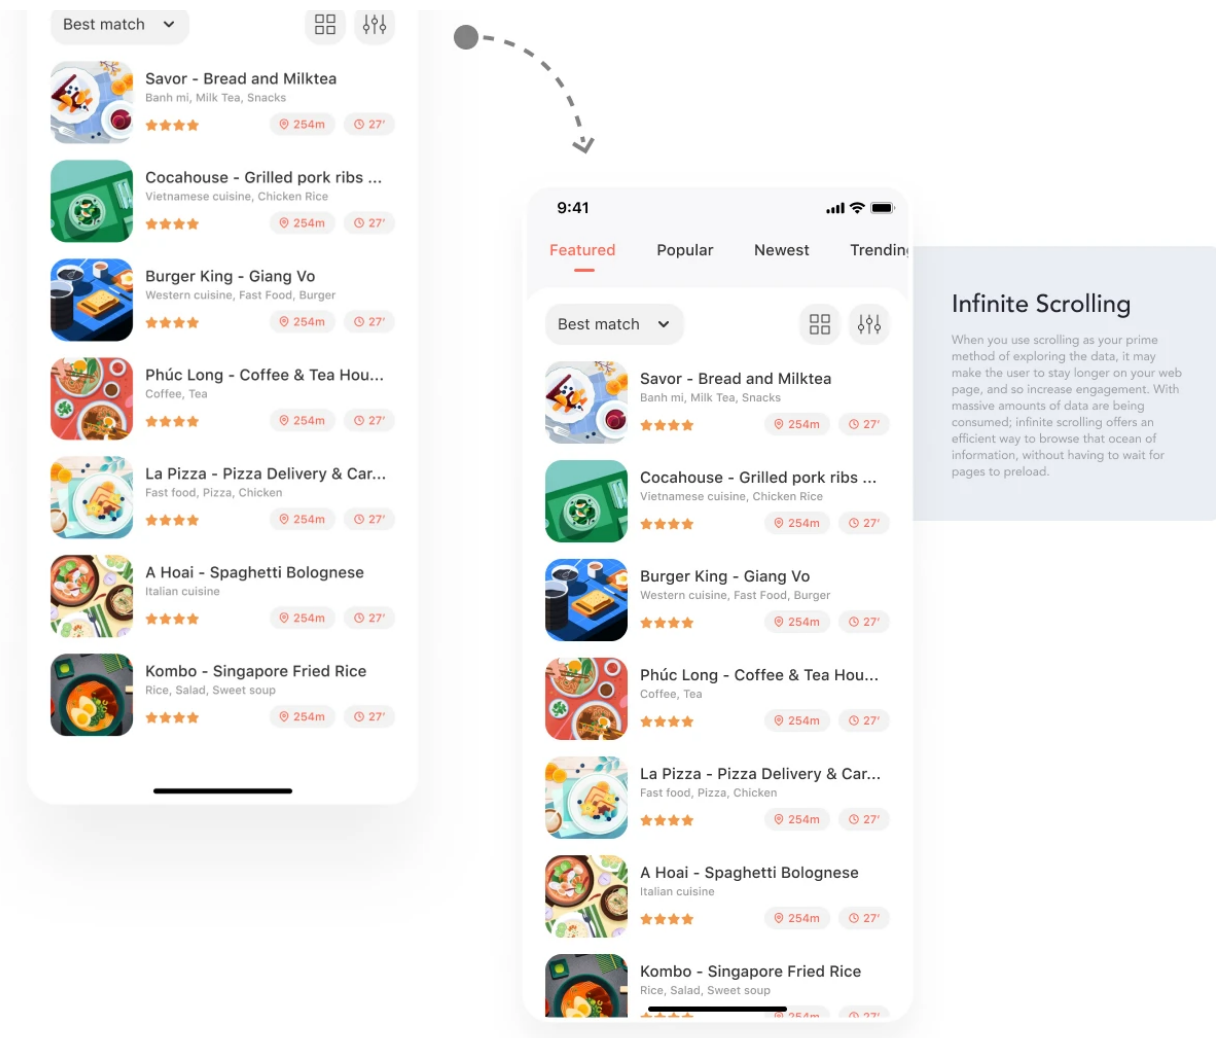

- The registration process would feel easier and more straightforward
- Good for user to try the dashboard/product right away (this is also achievable by logging in with social media button)

Great use of colors and typography!

suresh kp • Jul 21, 2025

Everything looks so balanced! 👉

de sky • Jul 19, 2025

It feels so fresh and professionally made. Well done!

Faria Akter • Jul 19, 2025

Amazing work!

Bilal Afkir • May 14, 2025

Excellent work

Sabbir Rahman • May 14, 2025

Awesome very nice and wow looking

FERDOUS AZAM • May 14, 2025

amazing work

Tamim Islam **PRO** • May 13, 2025

WOW! This project is such a great inspiration!

Daniela Montión • May 13, 2025

nice work!

Fezal Multani PRO • May 13, 2025

Really sets a high bar for UX! 🏆 100
